

Mr. Lee agreed an Examiner's Amendment to the claims to reflect the instant application does not need an intermediate mechanism such as an ignition switch to determine when to turn off the mobile data system but rather, the determination is based solely on the voltage coming from the vehicle battery.

The application has been amended as follows:

- o Per claim 1, in lines 8 and 12, replace "coupled" with –connected–.
- o Per claim 1, in lines 9 and 14, insert –directly– immediately after "variable voltage electrical power".
- o Per claim 1, in line <sup>15</sup>~~16~~, insert –directly– immediately after "voltage regulated electrical power".
- o Per claim 13, in lines 8 and 12, replace "coupled" with –connected–.
- o Per claim 13, in lines 9 and 13, insert –directly– immediately after "variable voltage electrical power".
- o Per claim 13, in line 15, insert –directly– immediately after "voltage regulated electrical power".
- o Per claim 17, in lines 7 and 11, replace "coupled" with –connected–.
- o Per claim 17, in lines 8 and 12, insert –directly– immediately after "variable voltage electrical power".
- o Per claim 17, in line 14, insert –directly– immediately after "voltage regulated electrical power".
- o Per claim 18, in line 11, insert –directly– immediately after "voltage regulated electrical power".
